## HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1, 3-10, and 21 are allowed.

The following is an examiner's statement of reasons for allowance:

As per claims 1 and 21, Colton teaches a method for correcting data signal errors in a meter, comprising:

- receiving ordered data signals from the meter (Fig. 1; col. 4, lines 14-18).

Not explicitly disclosed by Colton is:

- analyzing the sequence of the ordered data signals to detect a missing signal by calculating a temporary variable based on a present data signal and a previous data signal in the sequence of ordered data signals; and
- compensating for the missing data signal by adding a predetermined value to a sequence counter.

However, Minko teaches analyzing the sequence of the ordered data signals to detect a missing signal (col. 7, lines 7-14); and compensating for the missing data signal by adding a predetermined value to a sequence counter (col. 7, lines 20-25 and 34-40; lost packets are compensated for by when the lost packets count shown in Fig. 3, element 310 exceeds a user-defined acceptance threshold as detailed in col. 8, lines 23-26. Thus, adding a value to the lost packets counter initiates the recovery process).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to use the wireless data transmission method of Minko for remote real-time monitoring of utility meters. This modification would have been obvious to one of ordinary skill in the art, at the time the invention was made, because one of ordinary skill in the art would have recognized that Minko would have provided a reliable service that was dynamically adjustable (col. 8, lines 9-16) and could have been used for any appropriate communications channel (col. 2, lines 21-25).

Not explicitly disclosed by Minko is calculating a temporary 2-bit binary variable based on a present data signal and a previous data signal in the sequence of ordered data signals. However, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to calculate a temporary variable equal to the difference between a current packet index and a previous packet index for determining the difference as indicated by Minko in col. 7, lines 6-14.

One of ordinary skill in the art would have recognized that there had only been a finite number of identified predictable potential solutions for determining whether the difference between two numbers is equal to one. Therefore, a person of ordinary skill in the art at the time the invention was made could have pursued the known potential options to calculate the difference between the packet indexes of Minko using two's complement arithmetic.

The claim would have been obvious because a person of ordinary skill has good reason to pursue the known options within his or her technical grasp. If this leads to the

anticipated success, it is likely the product not of innovation but of ordinary skill and common sense.

However, none of the prior art of record reasonably teach or suggest the feature "correcting the value of a last valid direction indicator that indicates flow direction in the meter". Claims 3-10 depend from claim 1 and are allowable for at least these reasons.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Muller et al (US 6357034); Bayliss et al (US 2689950); Pearman et al (US 4953386); LaMothe (US 6542832).
